

'Air+' - air preparation housings

Fully configurable packaged units –complete or CKD

**You specify your needs,
we carefully select,
then we design**

The concept:

Air needs to be specially prepared for the needs of any process, whether it be a simple ventilation application, or a complex ISO-Class 5 clean room complete with temperature control and de-humidification.

Just about every application is unique, and it's combining what is added to the air in way of filtration, fans, and climatic control that Windsor do so well. Hence the concept of Air+ - Air plus fan, plus filter/s, plus whatever is needed to keep your operation running well.

Air+ packages comprise all the air treatment equipment necessary for your process wrapped up in a tidy, compact and affordable package tailored to suit.

The main concept is extremely flexible and within 24 hours, you can have a fully designed 3D viewable proposal in front of you to start integrating into your overall plans.

'Air+' - air preparation housings

The design concept

CKD package for 9 full size HEPA's, items can be easily taken to the install area and unit can be assembled within an hour using fastenings and sealant supplied.
